Pain-Free Body Sculpting

Dr. Roger Bassin introduces another beauty breakthrough – fat removal with no anesthesia and a non-chemical procedure that fills wrinkles for good.

Dr. Roger Bassin, founder of The Bassin Center for Plastic Surgery has been called a trendsetter, an innovator, a sculptor and even a miracle worker by his patients. That's because Dr. Bassin is able to do what most cosmetic surgeons can't. He can change a patient's physique with minimal pain to the patient, no downtime, no blood and even no general anesthesia.

His medical advancements have been featured on Good Morning America, Lifetime Network, Fox News, CBS News and many more. Most recently he was on The Dr. Oz Show giving a live demonstration of NaturalFill, a trademarked procedure he created that uses Aqualipo, also a procedure he invented, to remove and harvest a patient's own fat to be injected into smile lines, facial wrinkles, hands and breasts.

Lasting Looks

NaturalFill has given patients amazing results: natural, smooth skin that lasts.

For many patients the fact that NaturalFill is non-chemical is one of the biggest selling points. As the name implies, only natural substances from a patient's own body are used to create a youthful appearance.

Also, NaturalFill can be used with extensive fat removal or just a small amount to fill lines. Patients no longer have to return every six months to get another chemical injection. Dr. Bassin says NaturalFill lasts because it is a patient's own fat. Patients that used to get chemical injections are excited with the long-term savings NaturalFill offers.

Fat Removal Fast

Aqualipo works by combining SmartLipo technology with Body-Jet fat flushing.

First, powerful laser energy is used to melt away pockets of unwanted fat. At the same time that it is melting the fat, the heat from the laser promotes tissue tightening in the surrounding areas, so there is much less sagging skin in the

area that had fat removed, something that was an unwanted side-effect to other lipo procedures. Once the fat has been treated with SmartLipo technology, it is removed from the body with Body-Jet. This is in comparison to the older more aggressive fat removal process still performed by other Smartlipo surgeons. Body-Jet uses a concentrated water jet to flush intact fat cells from the body. Keeping the fat cells intact means the body sustains much less trauma. Also, intact fat cells can be preserved and used for filling facial lines, hands and breasts as it is with NaturalFill. The entire process can be done in the office in just 30 to 45 minutes for each area treated, prompting many to call Aqualipo the "lunch-time lipo".

The Best of the Best

Patients of Dr. Bassin say if you want the best you go to the best and when it comes to fast, painless results, Dr. Bassin is the best.

And his practice just keeps getting better. Dr. Bassin is pleased to announce the addition of Dr. Rigo Mendoz, a board certified plastic surgeon from Chicago to the Bassin Center. Dr. Bassin and Dr. Mendoz will be at the forefront in pioneering NaturalFill Natural Breast Enhancement for patients looking

for a permanent and more natural solution for breast augmentation.

Dr. Bassin has performed thousands of cosmetic procedures and has 10 years of experience. He graduated from George Washington University magna cum laude and completed his residency at Mt. Sinai Medical Center and a fellowship in facial cosmetic surgery in Chicago. As a facial cosmetic surgeon, Dr. Bassin also specializes in brow, eye and both full- and mid-face lifts. He is nationally sought out by television producers, medical reporters and news organizations because he is one of the most forward-thinking doctors in the industry today.

The Bassin Center for Plastic Surgery has grown so much that Dr. Bassin has expanded his practice to keep up with client demand. In Orlando, the Bassin Center is conveniently located on Alafaya Trail.

Dr. Bassin is the exclusive provider of Aqualipo and NaturalFill in Central Florida. Since both procedures are revolutionary, he knows people have lots of questions. Here he provides answers to some of the most frequently asked questions about both Aqualipo and NaturalFill.

How long is the down-time after Aqualipo?

Because Aqualipo uses gentle Body-Jet fat flushing there is virtually no bruising or swelling. Patients say the procedure has a warm, tingling sensation. There is no pain after. They walk out of the procedure feeling good. They may want to take it easy right after their procedure, but there are few limits to normal physical activity, and patients can go right back to work.

Is there much swelling after Aqualipo?

It depends on the patient, but usually if there is any, it is very slight. The same is true for bruising.

When will I see results from my Aqualipo procedure?

There is practically no swelling so instead of having to wait to see how the sculpting process will look, most patients will see permanent results within a week of their procedure.

On what areas of my body can I get Aqualipo?

Aqualipo can help with tummy flab, bra bulges, love handles, saddle bags, double chins, as well as excess fat in the neck, arms, thighs, knees and male breasts.

How many treatments of Aqualipo will I need?

Aqualipo is a body sculpting procedure, not a weight loss solution for people significantly overweight. Only one treatment is needed per area to refine and remove unwanted fat.

What side effects, if any, are there with NaturalFill?

Some redness may occur around injection area, but it will go away quickly.

Will I need to get touch-ups with NaturalFill?

No. NaturalFill is a permanent solution to facial lines.

Is NaturalFill safe?

NaturalFill is the safest facial line filler procedure on the market today. Your body is not going to adversely react since it is your own fat filling the wrinkles.

To keep up with patient demand, Dr. Bassin has opened six centers throughout Florida. His most recent office in Viera opened in March of last year. The large, modern and very relaxing centers all reflect Dr. Bassin's commitment to patient satisfaction and comfort. From flat screen TVs in the lobby to comfy robes and couches in the post-procedure area, at Bassin Center patients always come first.
